

Login/Registration with Firebase

DevFest 2020

Description

Can you list some apps that don't need authentication ! As we expect , there's not so many examples . Too lazy to create your own system ? Firebase is your best option !

In this challenge you are expected to create a mobile app with your preferred framework using **Firebase authentication**.

To pass the Challenge:

1. Create a login screen.
2. Create a registration screen .
3. Use authentication with email address.

Bonus:

1. Verify the account (send email verification).
2. Smooth UI.
3. Input validation (eg. Email pattern , password must have at least 6 characters...).
4. Save user data .

Documentation:

- [Android Firebase authentication](#)
- [Flutter Firebase authentication](#)
- [React native authentication](#)
