FIND ME !!

DevFest 2020

Description

Maps we all know the importance of having a map when going anywhere, Earth is very big and without Maps, we would never find our ways. Basically a map is a symbolic depiction emphasizing relationships between elements of some space, such as objects, regions, or themes. I just got a message from my friend he said he is lost and he can't come back, he wants me to find him and wants to transfer a secret message to me. But he just sent me a list of coordinates !! can you help me figure out what does he want?

Assets:

- The file that contains a list of coordinates

To pass the Challenge:

1. use the maps SDK and the coordinates to get where he is to get the message he wanted to transfer to me
2. The code is **case-sensitive**
3. Find the secret message he wanted to tell me
4. You can use any Map Service Provider like Google Maps, MapBox, OpenStreet...

Further Hacking:

1. You can explore different approaches to solve this challenge by using different SDKs

Hints

- The code you will find is not the one you should submit it will lead you to the next part of the challenge
- you will use the code in a web application that is used for **pasting, this web application allows users to share plain text.**
- Try to guess the application !!! and use the code as an identifier for the secret message my friend has sent
