DO IT AGAIN !!

DevFest 2020

Description

We all know how file and folder compression works, but this time we have faced a very hard virus that damaged our secure files, the problem is that we have been decompressing for a while now but still we can't get our document, we are really lost and need your skills in It Automation to help us decompress this nested zip.

Assets:

- The compressed File: you can find it in the same folder

To pass the Challenge:

1. automate the decompression of the zip file
2. find the secret file that is nested inside the multiple zips
3. submit the content of the secret file

Further Hacking:

1. The proposed solution was made with **Bash** but you can hack your ways into automation programming languages and recover my document

Hints

- Don't waste your time doing it manually
- If you are using **Bash** just use the **unzip** command
- the iterations number is unknown but we believe you have the skill to do it without the iterations number
